PROFILE

Fresh Computer Science graduate with a proven track record of building end-to-end applications, from a web-based Records Management System in PHP and SQL to a Flutter-Firebase mobile recruiting platform. Skilled in both front-end and back-end development, with a passion for creating practical technology solutions that address real community needs.

EXPERIENCE

Cagayan State University - Andrews Campus Registrar

Tuguegarao City, Cagayan

Programming and Office Intern

Dec 2025 - Feb 2026

- Lead the development and programming of a Records Management System, streamlining document workflows and reducing manual processing time for the registrar's office.
- Oversaw inventory management of student assets across 4 departments, ensuring accurate tracking and maintaining data integrity throughout the institution.
- Facilitated student enrollment processes and administered comprehensive student records and data, supporting accurate, up-to-date academic documentation across the registrar's operations.

PROJECTS

Records Management System | A web-based records management system for tracking physical records and storing digital student records.

- Developed a full-featured, web-based Records Management System using PHP, CSS, and SQL that digitized and centralized physical student records for the registrar's office, replacing a previously manual, paper-based process.
- Implemented secure user authentication and role-based access control, ensuring only authorized registrar staff could access, modify, or manage sensitive student records.
- Built robust search and filtering functionality, enabling staff to quickly retrieve specific student records from a centralized database.

HireGround | A mobile application for empowering job seekers and connecting talent with opportunities using hybrid recommendation algorithms for personalized job matching.

- Designed and developed a mobile recruiting platform connecting job seekers and employers within Tuguegarao, built with Flutter and Firebase to support real-time, cross-platform functionality.
- Built a skill-based job matching algorithm that analyzes job seeker keywords and skills to surface relevant job recommendations, reducing the effort of manual job searching.
- Developed an in-app CV generator, allowing job seekers to create and share professional resumes directly within the platform, with assets stored and managed via Cloudinary.
- Engineered a full employer-facing dashboard supporting job listing creation, applicant browsing and filtering, CV viewing, and direct messaging with candidates.

StudyLense | An AI-powered academic engagement monitoring system capable of detecting student engagement.

- Collaborated in a team to develop an AI-powered academic engagement monitoring system capable of detecting whether students are engaged or disengaged in real-time classroom settings.
- Contributed to the data collection and annotation pipeline, gathering and labeling training data for disengagement categories such as phone use, sleeping, and other off-task behaviors to train the YOLO detection model.
- Helped establish a structured dataset that enabled the model to distinguish between multiple classes of student engagement and distraction, forming the foundation of the system's detection accuracy.
- Built and validated as a working prototype demonstrating real-time, computer vision-based classroom monitoring using OpenCV and YOLO.

SKILLS

- **Language:** Python, Dart, C#, PHP, HTML, CSS, JavaScript, Java, Typescript
- **Framework:** Flutter, Ionic Angular,
- **Database:** Firebase, SQL
- **Development Tools:** Git, Github, VS Code, Xampp, Android Studio

EDUCATION

Cagayan State University - Carig Campus

Tuguegarao City, Cagayan

Bachelor of Science in Computer Science

Sept 2022 - May 2026

- GWA: 92.32
- Consecutive Dean's Lister
- With Merit
